

25 April 2011
 Achieving Progress and Impact

World Malaria Day at UC Davis:

Current research in vector biology and genetics at UC Davis

When: April 25, 2011, 9am – 4 pm

Where: Gourley Clinical Teaching Center Room 1102

Map of the Veterinary School at UC Davis: [Google Maps UCD Vet School](#)

Purpose: Malaria remains one of the most deadly vector-borne diseases in the world. Worldwide programs continue to rely on control programs based on the most recent research available. In honor of the Roll Back Malaria Program, promoting the education and research in the fight against Malaria, student and researchers at UC Davis engaged in research in vector biology and genetics will come together to discuss their research efforts.

For more information or to participate contact Becky Trout (rttrout@ucdavis.edu) or Michelle Sanford (mrsanford@ucdavis.edu).
