

What We Do

ADVOCATE

MVCAC is the leading voice and advocate for mosquito and vector control in the California Legislature. Each year, the organization hosts a Legislative Day at the State Capitol where participants meet with legislators and decision makers to promote the importance of mosquito and vector control. MVCAC's legislative committee and legislative advocates continually monitor legislation that could potentially affect mosquito and vector control and mobilize member agencies to take action. At the district level, MVCAC members promote grassroots outreach by maintaining relationships with their local policymakers and stakeholders, keeping MVCAC's efforts at the forefront of legislators' and policymakers' agendas.

EDUCATE

Education and awareness are critical to effective mosquito and vector control throughout California. MVCAC seeks to increase public awareness and educate Californians about the importance of mosquito and vector control through a variety of activities including "Mosquito Awareness Week," which takes place every April. MVCAC also engages partners in educational opportunities and seeks to collaborate with stakeholders to reinforce education efforts and continue to promote the prevention of mosquito- and vector-borne diseases.

INNOVATE

MVCAC hosts an annual conference that allows members to stay abreast of changing trends in mosquito and vector control, discuss pending legislation, complete continuing education units, and network with other mosquito and vector control experts in order to improve strategies to protect public health and the environment. MVCAC provides a forum for its members to collaborate with each other and support advancements in vector surveillance, laboratory techniques, and vector control and management. As an association, MVCAC played an integral role in the development and implementation of the California Surveillance Gateway (CalSurv), one of the most advanced and robust surveillance databases of its kind in the country.

COORDINATE

MVCAC partners with the California Department of Public Health to maintain mosquito and vector control certification and continuing education for all mosquito and vector control technicians. This partnership ensures that member agencies receive the appropriate training based on the latest science, allowing California mosquito and vector control technicians to use the most advanced techniques, as well as products registered with the U.S. Environmental Protection Agency.

MVCAC also collaborates with other state and federal agencies, such as the California State Water Resources Control Board, to ensure that the best vector management practices are implemented across the state to achieve the common goals of protecting public health and the environment, while allowing for innovation and development.
